

TailorX

Smart Tailoring. Smarter Growth.

May 26, 2025

Goal

*‘To design and implement a modular **tailoring** customization **platform** that enables customers to **personalize** products through **dynamic configuration** of fabrics, styles, accents, and measurements – while equipping internal teams with a powerful admin panel for **managing** and **publishing** these options with control, safety, and scalability’*

R&D and UI/UX Phase

Agendas

From cut to customer,
configure with confidence

From tailoring data to smart fashion

- Design faster.
- Design better.

Understand your client fashion

- Client-specific.
- Error-free & Compliant.

Tailoring logic you can trust

- Change with confidence.
- Audit with ease.

Access with purpose

- Right roles.
- Right controls.

Every action. Logged.

- Compliance-ready always.

— — —

Tailoring data in sync and always in shape

→ Clean configuration across teams and products

Customize like you know your client

→ Deliver personalization that feels truly personal.

Tailoring logic you can trust

→ Built-in rules ensure options always make sense.

Data You Can Trust

→ **Change with confidence. Audit with ease.**

Access with Purpose

→ **Right roles. Right controls.**

Every Action. Logged.
→ **Compliance-ready. Always.**

UI/UX to Software deliverables

- Core Tailoring Configuration Engine
- Shop Management System
- Client Configuration Module
- User Access Control
- Draft / Publish Workflow System
- Preview / Test Mode
- Dashboard & Reporting

— — —

Webshop

- Product customization
 - o Fabric selection
 - o Style configuration
 - o Accent input
 - o Measurement entry
- Preview rendering
- Session saving and cart integration

— — —

Control panel

- Core Tailoring Configuration Engine
- Shop Management System
- Client Configuration Module
- User Access Control
- Draft / Publish Workflow System
- Preview / Test Mode
- Dashboard & Reporting
- Inventory Integration
- Order Management
- Mobile App

— — —

Admin panel: Core Tailoring Configuration Engine

— — —

- Product Type Management (e.g., Shirt, Suit, Pants)
- Modular config system for:
 - Fabrics (Optional)
 - Style Attributes & Options
 - Accents
 - Measurement Schemas
- Configuration validation and compatibility logic

Admin panel: Draft / Publish Workflow System

— — —

- Reviewable tailoring data changes
- Draft → Review → Publish state model
- History and rollback capability

Admin panel: Shop Management System

- Support multiple tailoring shops with centralized control.
- Shop registry (add/edit shops)
- Shop-assigned order tracking
- VIP service

Portal: Client Configuration Module

— — —

- Understand your client.
- Remember their style.
- Recommend what fits next.

Portal: Preview / Test Mode

— — —

- Select product type
- Simulate complete flow

Admin panel: User Access Control

Secure login with role-based access:

- Admin: Full access to configuration and tracking
- Manager:
 - Edit configurations
 - Manage shop-specific settings
 - Review drafts
 - Publish content

Admin panel: Dashboard & Reporting Tools

— — —

Admin dashboard showing:

- Number of published/draft items per module
- Shop order volume
- Module usage analytics
- Downloadable reports

Admin panel: Inventory Integration

- Existing software solution provider should provide all required data, API, and others if required.

Admin panel: Order Management

— — —

- Order tracking
- Order cancellation

Mobile App Development
